

uk energy storage

EMPOWERED BY THE REA AND ITS MEMBERS

GROWING THE RENEWABLE ENERGY & CLEAN TECH ECONOMY

UK Energy Storage - introduction

Energy storage technologies offer huge potential for the UK's energy supply. The industry can deliver benefits for system stability and security of supply as well as helping decarbonise UK energy supplies. We aim to enable our members to grow their businesses and therefore deliver these benefits.

UK Energy Storage is the trade body for storage technologies of every type and scale in the UK, whatever the application. The body exists to further the aims of energy storage companies and establish a clear marketplace and policy framework.

UK Energy Storage - why join?

Energy storage is on a journey in the UK as the sector commercialises the technologies – being part of the journey will provide the opportunity to shape and influence the framework that develops.

The REA has a proven track record in delivering and developing effective policy and applies this experience and knowledge to the development of energy storage. For example, the REA led the campaign for Feed-in Tariffs, and first proposed the Renewable Heat Incentive, successfully overseeing its introduction.

UK Energy Storage - who should join?

Any organisation either directly or indirectly involved in all forms of energy storage, including manufacturers, installers, project developers and suppliers.

Benefits of membership

- Be part of helping shape the policy environment affecting your business
- Keep up to date on policies and regulatory matters relating to energy storage
- Opportunity to influence Government policy
- Keep up to date with technology developments in the sector
- Access to industry experts
- Networking opportunities with industry stakeholders
- Links to related policy coverage in grid and EVs

Group priorities

- Moving the perception of energy storage from “R&D” to a range of technologies ready for widespread deployment
- Establishing a policy framework for energy storage in the UK
- Developing common technical standards and good practice guides

Get the full picture only with UK Energy Storage

UK Energy Storage is run by the REA. Members will receive a host of associated benefits as a result of the organisation’s wider remit. The REA is the only energy trade body to cover electricity, heat and transport across the renewable technologies, as well as related issues including connecting to and utilising the grid network. Members have the opportunity to join any sector group within the REA that is of interest, covering the widest range of relevant topics from grid stability to renewable heating technologies.

If you would like to join UK Energy Storage, speak to us on 0207 925 3581 or email - membership@r-e-a.net

About the REA

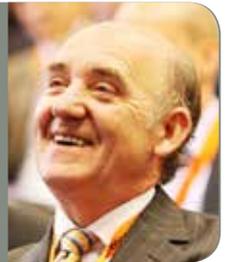

UK Energy Storage welcomes all storage technologies at all scales of deployment. It is empowered by the REA, which as a whole is the country's largest renewable energy trade body, with member companies that are active across the entire range of renewable energy technologies and applications. Renewables are a key driver for energy storage.

The REA runs cross-cutting working groups and initiatives as well as large and domestic scale electricity, transport, heat and green gas groups. This means group members benefit from being part of a larger organisation with more political clout and expertise across the renewables industry as a whole, as well as keeping abreast of the details affecting specific renewable technologies.

Meet the experts - UK Energy Storage at the REA

Ray Noble, Senior Adviser

A key player in the UK solar industry for the past few decades with contacts across the energy industry and in-depth knowledge of energy storage technologies.

Frank Gordon, Policy Manager

Day to day lead for UK Energy Storage, specialising in large scale power, grid and network issues.

James Court is the REA's Head of Public Affairs and Policy.

Having worked in energy policy and communications for a number of years, previous to the REA, James was policy manager at energy watchdog Consumer Focus.
