

Decarbonising trucks, trains, boats and planes

A conference organised by the REA's Renewable Transport Fuels Group

DATE: Tuesday, 3rd December 2019

VENUE: Osborne Clarke LLP, One London Wall, London EC2Y 5EB

Electrification should help decarbonise passenger car transport in the future, but heavier haulage, shipping and aviation are far more challenging sectors. The Renewable Transport Fuel Obligation incentivises strategic fuels for these sectors via the **Development Fuels sub-target**. This covers renewable aviation and drop in fuels, hydrogen and synthetic natural gas made from biomass wastes or renewable electricity. Higher blend biodiesel and HVO can also play a role in decarbonising these sectors.

Come to this conference to find out what the fuels of the future might be for trucks, trains, boats and planes; hear about the technologies involved; meet the companies developing these fuels and find out what the DfT is taking the first steps in encouraging the transformation of fuelling these hard-to-decarbonise sectors.

BOOK NOW — https://bit.ly/20odp5l

Who should attend?

- Haulage operators
- Ferry and shipping companies
- Port operators
- Representatives from airlines
- Oil companies and fuel retailers
- Those looking to develop low carbon fuels of the future
- Policy makers
- Academics interested in the decarbonising of transport

Delegate Fees

- REA Member £195.00 + VAT
- Non REA Members £295.00 + VAT
- Members of Partner Organisations £195.00 + VAT

PROGRAMME

09:15 - 09:45 **Coffee with Registration** 09:45 - 09:50 Welcome from Chair: REA Chief Executive, Dr Nina Skorupska CBE Scene setting, the scale of the challenge and the feedstocks available Chair: Nina Skorupska - REA 09:50 - 10:10 Scene setting - how rapidly do we need to move on decarbonisation of these areas of transport? **Committee on Climate Change [TBC]** 10:10 - 10:30 Feedstock constraints - a top down look at the global availability of biomass sources for transport fuels Stephanie Searle - International Council on Clean Transportation 10:30 - 10:50 Orkney, and its aspirations for making fuels from renewable electricity Neil Kermode - Managing Director, European Marine Energy Centre 10:50 - 11:20 Q & A then Coffee Break The options in aviation, shipping, rail and haulage 11:20 - 11:40 The most promising options for low carbon shipping Tim Morris - Chief Executive, The UK Major Ports Group 11:40 - 12:00 Self-Powered Trains - Replacing Diesel Mike Muldoon - Head of Business Development & Marketing, Alstom Transport 12:00 - 12:20 The potential for Sustainable Aviation Fuels Leigh Hudson - Sustainable Fuels & Carbon Manager, British Airways 12:20 - 12:40 The challenge of low carbon HGVs Philip Fjeld, CNG Fuels 12:40 - 13:50 **Questions then Lunch** The fuels 13:50 - 14:10 Hydrogen production from electrolysis, its potential and costs **Graham Cooley, ITM Power** 14:10 - 14:40 Other RFNBO gases, are they a good idea, can their costs come down and which are most promising? Keith Simons, SHV Energy 14:40 - 15:00 Case Study: aviation fuel from waste, Neville Hargreaves - VP Waste to Fuels, Velocys Other policy levers for boosting biofuel blend levels, 15:00 - 15:20 Gloria Esposito, LowCVP 15:20 - 15:40 Q & A then Coffee Break The policy & infrastructure **Session Chair: Neil Durno - ABB** 15:40 - 16:00 Infrastructure considerations in rolling out low carbon fuels Neil Durno - ABB 16:00 - 16:45 Panel session on policy incentives to decarbonise non-land based transport David Thackray, Tevva - member of Chartered Institute of Logistics and Transport Leigh Hudson, British Airways International Airlines Group Anna Ziou, UK Chamber of Shipping

Road Haulage Association Gaynor Hartnell, REA
